Table 4 Reduced Form Effects on Individual Development Items

Every indicator is oriented so that one means favourable development. Father RDD estimates are the primary analysis and mother RDD estimates are secondary.

Father RDD primary analysis

Specification 1 Monthly child-age fixed effects No donut hole

Outcome	Mean	8 years	7 years	6 years	5 years	4 years
Walks on uneven ground	0.848 P=1,427	0.041 [0.032] N=1,686	0.039 [0.032] N=1,556	0.038 [0.034] N=1,400	0.042 [0.036] N=1,192	0.030 [0.039] N=980

Notes: Cells report the OLS policy coefficient, birth-month-clustered standard error in brackets, and N. Exact child-month fixed effects for analysis months 24 to 59 are included but not displayed. Specification 2 adds female; specifications 3 and 4 separately add five household-income and five per-person-income groups; specifications 5 and 6 separately add the categorical number of aid types (0 as reference) and any aid. Neither aid control is combined with an income control. Aid specifications use only the six main questions; households with a blank or 99 on any question are excluded. Columns use symmetric 8- to 4-year bandwidths around the January 1987 cutoff. Every regression includes reform eligibility and split linear trends. Donut estimates exclude running-variable months -12 through +11 and show only the policy estimate, standard error, and N. Regressions use FAKTOR_FERT child survey weights. The sample retains one latest-born eligible child per household; raw ages 60 to 62 months map to analysis month 59. Significant policy coefficients are bold. P in the mean column is the unweighted number of positive outcomes in the no-donut 8-year sample. *** p<0.01, ** p<0.05, * p<0.10.

Table 4U Reduced Form Effects on Individual Development Items: UNICEF Age Intervals

UNICEF age-interval fixed effects. Father RDD estimates are the primary analysis and mother RDD estimates are secondary.

Notes: Cells report the OLS policy coefficient, birth-month-clustered standard error in brackets, and N. UNICEF child-age-interval fixed effects are included but not displayed. Specification 2 adds female; specifications 3 and 4 separately add five household-income and five per-person-income groups; specifications 5 and 6 separately add the categorical number of aid types (0 as reference) and any aid. Neither aid control is combined with an income control. Aid specifications use only the six main questions; households with a blank or 99 on any question are excluded. Columns use symmetric 8- to 4-year bandwidths around the January 1987 cutoff. Every regression includes reform eligibility and split linear trends. Donut estimates exclude running-variable months -12 through +11 and show only the policy estimate, standard error, and N. Regressions use FAKTOR_FERT child survey weights. The sample retains one latest-born eligible child per household; raw ages 60 to 62 months map to analysis month 59. Significant policy coefficients are bold. P in the mean column is the unweighted number of positive outcomes in the no-donut 8-year sample. *** p<0.01, ** p<0.05, * p<0.10.
