Table Primary Reduced Form Effects on Primary School Household Work and Educational Hours

The sample contains currently enrolled primary-school children. Household-work hours are coded as zero only when all nine household-task questions are answered no. Educational hours equal weekday plus weekend hours. Father RDD estimates are the primary analysis and mother RDD estimates are secondary.

Father RDD primary analysis

Notes: Cells show the OLS policy coefficient, birth-month-clustered standard error in brackets, and N. Exact child-month fixed effects for analysis months 0 to 71, split linear trends, and FAKTOR_FERT child survey weights are used. Specification 2 adds female; specifications 3 and 4 separately add five household-income and five per-person-income groups; specifications 5 and 6 separately add the categorical number of aid types (0 as reference) and any aid. Aid and income controls are not combined. Aid specifications exclude households with a blank or non-yes/no answer on any of the six main aid questions. Columns use 8- to 4-year bandwidths; donuts drop months -12 to +11. One latest-born eligible child is kept per household. *** p<0.01, ** p<0.05, * p<0.10.
