Table 16 WHO supplementary anthropometric outcomes for middle school, youngest child

Current school enrollment defines the middle school sample. One youngest child per household is selected within this level. WHO 2007 sex-specific monthly growth references use age on 16 December 2022. WAZ is defined only through month 120. Father and mother reform estimates use the established weighted RDD.

Father RDD primary analysis

Notes: Cells report the reform coefficient, clustered standard error in brackets, and N; bold stars indicate *** p<0.01, ** p<0.05, * p<0.10. Five columns use 8- to 4-year parental birth-month bandwidths. The 12-month donut omits months -12 through +11. All specifications include exact child-month fixed effects, split linear trends, and FAKTOR_FERT survey weights. Specification 2 adds female; specifications 3 and 4 separately add household and per-person income groups; specifications 5 and 6 separately add aid count and any aid. WHO 2007 HAZ and BMIZ are valid at months 61-228; WAZ ends at month 120. Implausible z scores are excluded. P is the positive-case count in the eight-year no-donut sample. NA indicates zero standard error. School-level and measurement selection affect interpretation.
